TITLE : MEDIUM TURN MECHANISM

ABSTRACT : PURPOSE: To make a mechanism small-size and control it easily, by constituting the mechanism so that a turntable, which holds a credit card, is turned while being carried in the advance direction of the card.

CONSTITUTION: A link mechanism is provided on a main shaft 4G which is rotated normally and reversed; and in case of normal rotating, a credit card is rotated at 90° from a carrying path and is set or reset into an inprinter part. In case of reversing, the credit card is lifted from the home position of a turntable 4A in the reject direction. Consequently, since the credit card is set, reset or rejected from the carrying path to the inprinter part by the rotation of the main shaft 4G, the control becomes easy, and the mechanism becomes compact.
